

Paso a Paso MiniAplicacion StateFulWidgets

1. Crear un Proyecto en Flutter: flutter create **nombre_proyecto**

2. Crear 3 archivos dart aparte del main.dart que son: **home_screen.dart**, **profile_screen.dart**, **search_screen.dart** y colocar el siguiente código

home_screen.dart

```
import 'package:flutter/material.dart';

class HomeScreen extends StatefulWidget {
  const HomeScreen({super.key});

  @override
  State<HomeScreen> createState() => _HomeScreenState();
}

class _HomeScreenState extends State<HomeScreen> {
  bool _isChecked = false;
  int _radioValue = 0;
  String _selectedOption = 'Opcion 1';
  DateTime _selectedDate = DateTime.now();
  final TextEditingController _controller = TextEditingController();

  @override
```

```

Widget build(BuildContext context) {
  return Scaffold(
    appBar: AppBar(title: const Text('Inicio')),
    body: SingleChildScrollView(
      padding: const EdgeInsets.all(16.0),
      child: Column(
        children: [
          TextField(
            controller: _controller,
            decoration: const InputDecoration(
              labelText: "Ingresa Texto", border: OutlineInputBorder(),
            ),
          ),
          const SizedBox(height: 20),
          CheckboxListTile(
            title: const Text("Aceptar terminos?"),
            value: _isChecked,
            onChanged: (val) => setState(() => _isChecked = val!),
          ),
          const Text("Selecciona una opcion: "),
          RadioListTile(
            title: const Text("Opcion A"),
            value: 0,
            groupValue: _radioValue,
            onChanged: (val) => setState(() => _radioValue = val!),
          ),
          RadioListTile(
            title: const Text("Opcion B"),
            value: 1,
            groupValue: _radioValue,
            onChanged: (val) => setState(() => _radioValue = val!),
          ),
          DropdownButtonFormField<String>(
            value: _selectedOption,
            items: ['Opcion 1', 'Opcion 2', 'Opcion 3']
              .map((e) => DropdownMenuItem(value: e, child: Text(e)))
              .toList(),
            onChanged: (val) =>
              const InputDecoration(labelText: 'Categoria'),
          ),
          const SizedBox(height: 20),
          ElevatedButton.icon(
            onPressed: () async {
              DateTime? picked = await showDatePicker(
                context: context,
                initialDate: _selectedDate,
                firstDate: DateTime(2000),
                lastDate: DateTime(2100));
            },
            icon: Icon(Icons.calendar_today),
          ),
        ],
      ),
    ),
  );
}

```

```

        if (picked != null)
            setState(() => _selectedDate = picked);
    },
    icon: const Icon(Icons.calendar_today),
    label: Text(
        "Fecha:
${_selectedDate.day}/${_selectedDate.month}/${_selectedDate.year}")),
    const SizedBox(height: 20),
    ElevatedButton(
        style: ElevatedButton.styleFrom(
            minimumSize: const Size.fromHeight(50)),
        onPressed: () => ScaffoldMessenger.of(context)
            .showSnackBar(const SnackBar(content: Text('Guardado'))),
        child: const Text('Enviar Formulario'),
    )
],
));
}
}

```

profile_screen.dart

```

import 'package:flutter/material.dart';

class ProfileScreen extends StatefulWidget {
    const ProfileScreen({super.key});

    @override
    State<ProfileScreen> createState() => _ProfileScreenState();
}

class _ProfileScreenState extends State<ProfileScreen> {
    bool _notificationsEnable = true;
    int _gender = 0;
    String _planType = 'Free';
    DateTime _birthDate = DateTime(1995, 1, 1);
    final TextEditingController _nameController =
        TextEditingController(text: "Usuario Flutter");

    @override
    Widget build(BuildContext context) {
        return Scaffold(
            appBar: AppBar(title: const Text('Perfil')),

```

```

body: SingleChildScrollView(
    padding: const EdgeInsets.all(16.0),
    child: Column(
        children: [
            const CircleAvatar(
                radius: 40, child: Icon(Icons.person, size: 50)),
            const SizedBox(height: 20),
            TextField(
                controller: _nameController,
                decoration: const InputDecoration(
                    labelText: 'Nombre Completo',
                    border: UnderlineInputBorder(),
                ),
            ),
            const SizedBox(height: 15),
            SwitchListTile(
                title: const Text('Recibir Notificaciones'),
                value: _notificationsEnable,
                onChanged: (val) =>
                    setState(() => _notificationsEnable = val),
            ),
            Row(
                children: [
                    Expanded(
                        child: RadioListTile(
                            title: const Text("M"),
                            value: 0,
                            groupValue: _gender,
                            onChanged: (val) =>
                                setState(() => _gender = val!))),
                    Expanded(
                        child: RadioListTile(
                            title: const Text("F"),
                            value: 1,
                            groupValue: _gender,
                            onChanged: (val) =>
                                setState(() => _gender = val!))),
                ],
            ),
            DropdownButton<String>(
                isExpanded: true,
                value: _planType,
                items: ['Free', 'Premium', 'Business']
                    .map((e) =>
                        DropdownMenuItem(value: e, child: Text("Plan $e")))
                    .toList(),
            ),
        ],
    ),
)

```

```

        onChanged: (val) => setState(() => _planType = val!)),
const SizedBox(height: 20),
ListTile(
  title: const Text("Fecha de nacimiento"),
  subtitle: Text(
    "${_birthDate.day}/${_birthDate.month}/${_birthDate.year}")
),
trailing: const Icon(Icons.edit_calendar),
onTap: () async {
  DateTime? picked = await showDatePicker(
    context: context,
    initialDate: _birthDate,
    firstDate: DateTime(1970),
    lastDate: DateTime.now(),
  );

  if (picked != null) setState(() => _birthDate = picked);
},
),
const SizedBox(height: 30),
ElevatedButton(
  style: ElevatedButton.styleFrom(
    backgroundColor: Colors.blue,
    foregroundColor: Colors.white),
  onPressed: () {
    showDialog(
      context: context,
      builder: (context) => AlertDialog(
        title: const Text("Perfil Actualizado"),
        actions: [
          TextButton(
            onPressed: () => Navigator.pop(context),
            child: const Text("OK"))
        ],
      ),
    );
  },
  child: const Text("Actualizar Perfil"),
)
],
)));
}
}

```

search_screen.dart

```
import 'package:flutter/material.dart';

class SearchScreen extends StatefulWidget {
  const SearchScreen({super.key});

  @override
  State<SearchScreen> createState() => _SearchScreenState();
}

class _SearchScreenState extends State<SearchScreen> {
  @override
  Widget build(BuildContext context) {
    return Scaffold(
      appBar: AppBar(title: const Text('Este titulo')),
      body: SingleChildScrollView()
    );
  }
}
```

3. Colocar el siguiente código en el **main.dart** para ejecutar las 3 pantallas

```
import 'package:flutter/material.dart';
import 'home_screen.dart';
import 'search_screen.dart';
import 'profile_screen.dart';

void main() => runApp(const MyApp());

class MyApp extends StatelessWidget {
  const MyApp({super.key});

  @override
  Widget build(BuildContext context) {
    return MaterialApp(
      debugShowCheckedModeBanner: false,
      theme: ThemeData(useMaterial3: true, colorSchemeSeed: Colors.blue),
      home: const MainNavigation(),
    );
  }
}
```

```

class MainNavigation extends StatefulWidget {
  const MainNavigation({super.key});

  @override
  State<MainNavigation> createState() => _MainNavigationState();
}

class _MainNavigationState extends State<MainNavigation> {
  int _selectedIndex = 0;

  final List<Widget> _screens = [
    const HomeScreen(),
    const SearchScreen(),
    const ProfileScreen(),
  ];

  void _onItemTapped(int index) {
    setState(() {
      _selectedIndex = index;
    });
  }

  @override
  Widget build(BuildContext context) {
    return Scaffold(
      body: IndexedStack(
        index: _selectedIndex,
        children: _screens,
      ),
      bottomNavigationBar: BottomNavigationBar(
        currentIndex: _selectedIndex,
        onTap: _onItemTapped,
        items: const [
          BottomNavigationBarItem(icon: Icon(Icons.home), label: 'Inicio'),
          BottomNavigationBarItem(icon: Icon(Icons.search), label: 'Buscar'),
          BottomNavigationBarItem(icon: Icon(Icons.person), label: 'Perfil'),
        ],
      ),
    );
  }
}

```

4. Ejecutar el programa

localhost:55589

localhost:55589

Inicio

Ingresa Texto

Aceptar terminos?

Selecciona una opcion:

☒ Opcion A

☐ Opcion B
